| 19. ABSTRACT (Continue on reverse if necessary and identify by block number) This report presents measures of economic activity associated with the Corps of Engineers recreation program. Analysis presented in this report was specified by a committee formed by Headquarters, US Army Corps of Engineers to develop "performance indicators" for the Natural Resources Management Program. The economic impact performance presented is the ratio of visitor expenditures to recreation-related operation and maintenance costs. Performance indicators are presented for all Corps projects, District and Division offices. | | | | | | | | |

PFEFACE

This report describes work performed under the Natural Resources
Research Program (NRRP) at the request of Headquarters, US Army Corps of Engineers (HQUSACE). The report presents an analysis of an economic impact performance indicator developed by a committee tasked to create performance indicators for functions of the HQUSACE Operations and Readiness Division. As a part of the analysis, significant economic activity was identified in association with the Corps' recreation program.

The authors of this report were Messrs. R. Scott Jackson and William A. Rogers, Environmental Laboratory (EL), US Army Engineer Waterways Experiment Station (WES), Vicksburg, MS. The study was supervised by Mr. H. Roger Hamilton, Chief. Resource Analysis Group, and Dr. Conrad J. Kirby, Chier, Environmental Resources Division, EL. Mr. J. L. Decell was Manager of NRRP, and Dr. John Harrison was Chief, EL. The report was edited by Ms. Janean Shirley, Information Management Division, Information Technology Laboratory, WES. Ms. Judith Rice and Mr. Robert Daniel, HQUSACE, were Technical Monitors of the NRRP.

COL Larry B. Fulton, EN, was Commander and Director of WES. Dr. Robert W. Whalin was Technical Director.

DEVELOPMENT OF AN ECONOMIC IMPACT PERFORMANCE INDICATOR FOR THE CORPS OF ENGINEERS RECREATION PROGRAM

PHASE II: FISCAL YEARS 1987 AND 1988 ECONOMIC IMPACT PERFORMANCE INDICATORS

PART I: INTRODUCTION

Background

1. This report is the second in a series documenting economic activity generated by investment in recreation management at Corps of Engineers projects. The effort was initiated in response to a request from Headquarters, US Army Corps of Engineers (HQUSACE) and a committee formed to identify appropriate performance indicators (PI's) for natural resource management functions. The committee's activities were part of a larger initiative to develop measures of organizational performance for all functions in the CE Operations and Readiness Division. The committee decided to develop the PI presented in this report as a measure of economic activity associated with the Corps' recreation program.

Purpose and Scope

- 2. The purpose of this report is to present economic impact PI's for all administrative levels within the Corps of Engineers for fiscal year (FY) 87 and FY 88. Additionally, general findings on economic activity associated with the Corps' recreation program are discussed. The PI presented in this report was applied exclusively to existing data obtained from a variety of sources. Application of this PI (as well as all others) to Natural Resource Management Program activities will be specified by HQUSACE.
- 3. The "economic impact" PI presented in this report is the ratio of estimated visitor spending to Federal recreation-related operation and maintenance (O&M) spending. In other words, the indicator represents the number of dollars of visitor spending per dollar of O&M spending. The indicator considers all visitation occurring in developed recreation areas, including areas outgranted to non-Federal agencies. Spending by outgrant agencies is not included in the PI calculations.

PART II: PROCEDURES

- 4. An initial economic impact PI report, prepared in December 1988, demonstrated analysis procedures and computed visitor expenditures for South Atlantic Division projects. The calculation procedures developed in the SAD demonstration, and presented in Appendix A, were used to compute the economic impact PI's presented in this report.
- 5. The analysis presented in this report is based on camping and dayuse visitor expenditure surveys conducted at five Corps projects in the Southeastern United States (Lakes Barkley, Beaver, Benbrook, and Hartwell, and the
 Arkansas River). The results of the surveys indicated that campers spent a
 rate of \$1.76 per visitor hour for nondurable goods and services associated
 with their visit. Day users spent at a rate of \$3.96 per visitor hour. The
 large difference in spending rates was the reason visitor spending was computed separately for the two groups and then summed to produce a total estimate of visitor spending for each project.
- 6. Visitation and budget information were obtained from the Natural Resource Management System (NRMS) and the Corps of Engineers Management Information System (COEMIS) data bases, respectively. Recreation O&M expenditures were derived from COEMIS feature accounts 06, 11, 16, and 29.
- 7. Visitor hours for all NRMS-identified recreation areas (regardless of managing agency) were included in the PI calculations. Dispersed recreation use not associated with NRMS areas was not considered in the analysis because this type of use is not as closely associated with O&M activities as developed area recreation use. This rule for computing visitor hours was used for all projects with the following exceptions:
 - <u>a.</u> When the sum of area visitor hours for a project exceeded total project visitor hours, total project visitor hours were used in the calculations.
 - b. When the sum of area visitor hours was zero, total project visitor hours were used in the calculations.
- 8. While the PI's are reported on a fiscal year basis, visitation included in the analysis is reported on a calendar year basis. The PI's were developed based on the calendar year visitation reports and fiscal year budgets.
- 9. For most projects, visitation and budget information is provided in sufficient detail to compute the PI on an individual project basis. However,

it was necessary to aggregate 140 NRMS projects into 25 groups to compute PI's. This was required because COEMIS accounting practices do not allow the disaggregation of 0&M costs for some NRMS projects. Visitor expenditures were computed for all NRMS projects within each aggregate to produce a single visitor expenditure estimate. This was then divided by total recreation 0&M cost to produce the economic impact PI for each aggregate.

10. Project visitor expenditures and O&M costs were summed by District and Division to produce District and Division performance indicators. Fifteen projects reported no recreation O&M costs in FY 87 and twelve projects recorded no O&M costs in FY 88. Economic impact PI's could not be computed for those projects. However, estimated visitor expenditures for the projects were included when calculating overall District and Division PI's.

PART III: RESULTS

- 11. Analysis presented in this report provides an indication of the significant economic activity that is generated by recreation opportunities provided at Corps projects. In 1987, it is estimated that over \$5.1 billion were spent by visitors to Corps projects for nondurable goods and services (e.g., food, fuel, bait, and lodging). These expenditures were made to engage in over 2.08 billion visitor hours of recreation activity in over 4,000 developed recreation areas at Corps-operated lakes and rivers.
- 12. Reported visitation declined in 1988 by 3.8 percent to approximately 2.01 billion visitor hours. The reduction in visitation translated into a 2.5-percent decline in estimated visitor spending to approximately \$5.03 billion. The reduction in reported visitation may have been a result of converting visitation reports to the visitor hour unit of measure instead of a real decline in recreation activities.
- 13. A summary of Corps Division economic impact PI's is provided for FY 87 (Table 1) and FY 88 (Table 2). Figure 1 provides a comparison of FY 87 and FY 88 Division performance indicators. In FY 87 the economic impact PI for all Corps projects combined was \$33.53. Four Divisions had a higher than average PI, and six Division PI's were less than the Corps average. The Division with the highest PI was the Ohio River Division (ORD) with an indicator of \$55.36. The lowest was the Lower Mississippi River Division with an indicator of \$13.15.
- 14. In FY 88, the Corps-wide PI was \$29.30, a reduction of over \$4 from the previous year. This reduction was due to an 11.6 percent increase in recreation-related O&M cost reporting Corps-wide, and a significant decrease in visitation (over 200 million visitor hours) reported in the Southwestern Division (SWD) in 1988. The ORD again produced the highest PI in FY 88 with a value of \$64.86. This is a 17-percent increase over the 1987 ORD performance indicator (\$55.36). The reason for this increase was a 23-percent increase in reported visitation over the previous year. The lowest Division PI in FY 88 was \$12.66 reported by the North Central Division. In FY 88, as with the previous year, four Divisions produced a PI greater than the average and six reported a PI less than the Corps average of \$29.30.

15. Estimated visitor expenditures and economic impact PI's for FY 87 and FY 88 are provided in Appendixes B and C, respectively, for all Corps projects included in the NRMS.

PART IV: LIMITATIONS

- best existing information. The primary limitations of the PI's presented in this report are the lack of regional visitor spending data and limitation of visitor spending estimates to only nondurable goods and services. Spending on durable goods (e.g., boats and camping equipment) was not included in the calculations due to a lack of spending data on durable goods.
- 17. Potential error of applying expenditure rates from the surveyed projects in the Southeastern United States to all Corps projects is unknown due to the lack of regional data on visitor spending. Visitor spending surveys that are planned for Corps projects in regions outside the Southeast will provide regional visitor spending profiles to improve expenditure estimates for use in future PI calculations.
- 18. The precision of the economic impact PI is also partially dependent on the accuracy of visitation estimates. A review of NRMS visitation data used in this analysis indicated potential problems in visitation reports. In both 1987 and 1988, over 50 projects reported total project visitor hours that were less than the sum of area visitor hours. In some cases the differences were significant. While this is possible where campers use multiple areas, it is unlikely that this is a complete explanation, given the magnitude of the discrepancies.

PART V: CONCLUSIONS AND RECOMMENDATIONS

- 19. Visitor spending figures presented in this report are estimates of total spending made directly by the visitor, regardless of where the purchase was made. These estimates do not consider the "ripple effect" or secondary spending made by retailers to distributors and suppliers to satisfy the demand generated by Corps visitors. The spending estimates cannot be translated into estimates of income, jobs, or other measures of economic activity. Measures such as these can be obtained at the project or region level using economic input/output models.
- 20. It is recommended that future performance indicators adjust 0&M and visitor spending to account for inflation. This will become increasingly important as indicators are tracked over time.
- 21. The economic impact PI presented in this report provides a general method of estimating the economic impact of the Corps' recreation program on private-sector activities. The PI's presented in this report are simply a measure of current conditions. Changes in the scope, size, and emphasis of a recreation program may change the economic impact PI for that program. Scheduling of infrequent maintenance activities, age of facilities, locational factors, extent of facility outgrants, and seasonal use patterns are all factors that may influence the Federal cost of operating a facility and therefore the PI. These factors must be taken into consideration when comparing PI's, particularly at the project level.

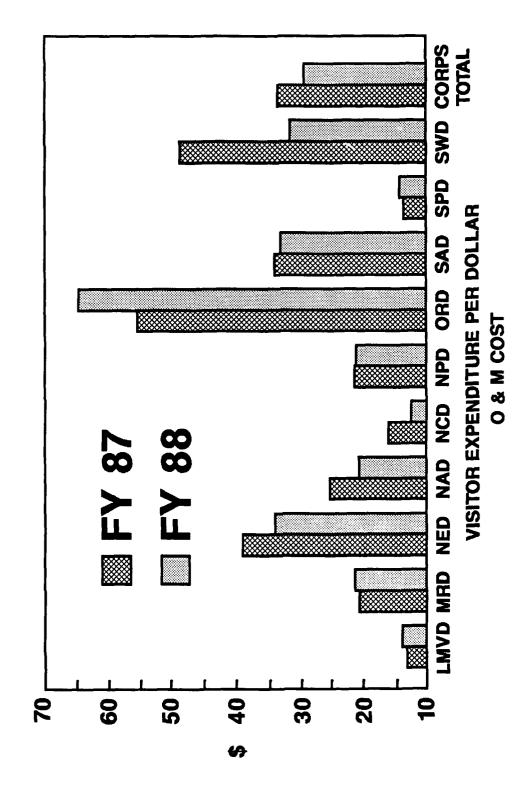

Figure 1. Comparison of Division performance indicators for FY 87 and FY 88

APPENDIX A: PERFORMANCE INDICATOR CALCULATION PROCEDURE

- 1. The following hypothetical example illustrates the procedure for determining visitor expenditures per recreation operation and maintenance (O&M) dollar. In this example the project received 12,000,000 visitor hours of developed area recreation use and 10 percent of all people using the project were campers. The recreation O&M budget for this project was \$585,000. The data sources used in the calculations are noted by script letters in the calculations and presented at the end of this example.
 - a. Step 1. Convert percent of people camping and people engaged in day-use activities to percent visitor hours (v.h.) in camping and day use. (Calculations is this step are illustrated on per hundred person basis.)

Camping: 583 hr/853 hr = 68.347% v.h. in camping Day use: 270 hr/853 hr = 31.653% v.h. in day use

- b. Step 2. Compute v.h. in camping and day use.
 - Camping: $12,000,000^{(a)}$ total v.h. × 68.347% camping v.h. = 8,201,640 v.h.

Day use: $12,000,000^{(a)}$ total v.h. × 31.653% day use v.h. = 3.798,360 v.h.

- c. Step 3. Determine project visitor expenditures.
 - 8,201,640 camping v.h. \times \$1.76^(d) = \$14,434,886 camper expenditures 3,798,360 day-use v.h. \times \$3.96^(d) = \$15,041,505 day-user expenditures \$29,476,391 total visitor expenditures
- <u>d</u>. Step 4. Determine the visitor expenditures per dollar of recreation O&M budget.
 - \$29,476,391 total visitor expenditures \$585,000 (e) recreation O&M expenditures = \$50.39 visitor expenditures per dollar of recreation O&M expenditure.
- 2. The following information sources were used to perform the calculations.
 - <u>a.</u> Natural Resource Management System, Headquarters, US Army Corps of Engineers, 20 Massachusetts Avenue, Washington, DC.

- Percent campers and day users (by project)
- Visitation in visitor hours (by project)
- <u>b.</u> Lawrence, Larry R. 1987. "Summary of the 1985 Campground Receipt Study," Technical Report R-87-1, US Army Engineer Waterways Experiment Station, Vicksburg, MS.
 - Average night's camping (nationwide average)
- c. US Army Engineer Waterways Experiment Station. 1987. "Analysis of a Nationwide Sample of 128 Recreation Areas Used to Derive Factors to Convert to Visitor Hour Reporting in 1986," unpublished report, Vicksburg, MS.
 - Average hours per day-use trip (nationwide average)
- <u>d</u>. US Army Engineer Waterways Experiment Station. 1987. "Public Area Recreation Visitor Survey, 1985-1986," unpublished results, Vicksburg, MS.
 - Visitor expenditure rates for campers and day users (southeastern US average)
- e. Corps of Engineers Management Information System (COEMIS), Headquarters, US Army Corps of Engineers, Washington, DC.
 - Recreation O&M budget, COEMIS Feature Accounts 06, 11, 16, and 29 (by project)
